

SUMMARY

Data engineer with 5+ years building ELT pipelines and dbt transformation layers on Databricks and Azure, processing tens of millions of daily transactions across CRM, ERP, and SaaS API sources. Reduced query latency and eliminated a class of broken-report incidents by owning data contracts, automated test coverage, and Gold-layer validation end to end.

EDUCATION

Executive MS in Artificial Intelligence - New England College

August 2026 - May 2028

Masters in Computer Science – New York Institute of Technology (GPA: 3.80/4)

September 2021 - May 2023

Bachelors in Computer Science – Mumbai University (GPA: 3.4/4)

August 2017 - June 2021

SKILLS

Programming & Data Tools: SQL(window functions, CTEs, query/performance), Python (Pandas, NumPy, PySpark), R
Data Engineering: Apache Spark, Airflow, dbt, Fivetran, Medallion/Lakehouse Architecture, ETL/ELT, Reverse ETL
Cloud: AWS (S3, Glue, Lambda, Redshift, EC2, RDS), Snowflake, Databricks, Azure (Synapse, Data Lake), Terraform, Docker
BI & Visualization: Hex, Power BI, Tableau, Looker, Grafana, Excel
AI & Automation: n8n, LangChain, GPT-4, Claude (API), Vector Databases, AI-assisted CI/CD, MCP, RAG, LLM
Governance & Security: PII classification, column-level/row-level security, schema drift handling, data quality frameworks
Collaboration & Soft Skills: Cross-functional project ownership, Agile, stakeholder communication, technical mentorship

PROFESSIONAL EXPERIENCE

Data Engineer - T-Mobile - New York, NY

August 2023 - August 2026

- Owned end-to-end ELT pipeline architecture using Fivetran and Snowflake, ingesting **15+** source systems (CRM, ERP, SaaS APIs) and processing **2B+** daily ad events (impressions, taps, installs) across **850M+** weekly App Store users records.
- Architected a **Medallion Lakehouse (Bronze/Silver/Gold)** on Azure with dbt, modularizing **60+** transformation models under version control and cutting average pipeline maintenance time by **35%**.
- Defined and enforced data contracts and SLA agreements with Finance, Sales, and Product stakeholders, reducing ad hoc data requests by **40%** and establishing a single source of truth for **GTM reporting**.
- Built a composite **Customer Risk Model** in the Gold layer synthesizing billing, engagement, and usage signals, enabling the Customer Success team to flag at-risk accounts representing **\$230M+** in annual recurring revenue.
- Implemented automated dbt schema, null, and custom business-logic tests across **100%** of critical financial models, eliminating a recurring class of broken-dashboard incidents that had affected monthly close reporting.
- Drove **AI adoption** into the engineering workflow by Claude Code into **dbt** code generation, PR review automation, and documentation, reducing review cycle time by 50% and increasing test coverage from **60%** to **95%**.
- Owned the BI serving layer and partnered directly with C-suite stakeholders to define and lock KPI definitions, pushing back on ambiguous requests to prevent metric drift across 8 executive dashboards.

Graduate Research Assistant – NYIT, New York, NY

September 2021 - May 2023

- Audited and analyzed large-scale data sets from the internal platform to improve data accuracy, uncover actionable insights, and improve student-employer engagement, contributing to a **25%** increase in placements and effective career services strategies.
- Architected robust **data extraction** workflows using SQL and Excel, simplifying research projects through enhanced data visibility, streamlined reporting processes, and improved access to actionable insights for administrative teams.
- Delivered Tableau and Power BI dashboards to surface trends and **KPIs** used in leadership planning and resource allocation.

Web Development Internship - Nuclear Power Corporation of India Limited (NPCIL) Mumbai, India

June 2018 - July 2018

- Redesigned and modernized NPCIL's careers page using **React** and **Bootstrap**, transforming an outdated UI into a modern, visually appealing, and responsive interface that aligned with the organization's branding and accessibility standards.
- Replaced legacy **HTML/CSS** structures with a mobile-first, component-based architecture, significantly improving navigation, user experience, and page load times across devices, resulting in an increase in engagement time from job applicants.
- Worked alongside with the internal development team to implement clean, maintainable front-end code and ensured seamless integration with the existing backend, optimizing the portal for scalability and future enhancements.

PROJECTS

AI Project | APEX Accounting Agent Workbench

- Developed a human-in-the-loop AI agent workbench for APEX Accounting using Python, Groq (GPT-OSS-120B), tool calling, and a web-based interface, enabling autonomous task execution, workspace file selection, real-time agent activity tracking, and supervisor pause, interrupt, and guidance controls.

SaaS Churn Analytics Platform (dbt, Databricks)

- Engineered a production-grade churn prediction pipeline on Databricks (Medallion architecture), utilizing **dbt** for composite risk scoring and automated quality testing to identify **high-risk revenue** for Customer Success teams.

Customer Service AI Agent:

- Developed an AI-driven email customer service agent using **N8N**, Gemini, and **vector databases** for knowledge retrieval, incorporating sentiment analysis to achieve a 92% first-contact resolution rate and reduce average response time by **85%**.
